Sustainability Across the Curriculum

Goals and Objectives
This C4ward works with the Sustainability Committee to extend conversation about sustainability and the curriculum. We have developed sustainability learning outcomes, and are working towards an "S" designation for courses with sustainability content.

Intended Outcomes
To create resilience in both faculty and students, and think about ways of teaching sustainability that go beyond "shock and awe." We are interested in sharing resources, speakers, and lesson plan ideas to relate different disciplines to sustainability.

Resources and Constraints
➢ Time and scheduling are a real issue
