January 23, 2007

I chose Chapter 8 because it involves operating systems and utility programs. I enjoyed reading the chapter because it gave me ideas on how to better use my own personal computer at home. Overall it was an enjoyable chapter but I would have preferred a little more details on the utility programs. The one thing I learned from exploring chapter 8 was the diagnostic utility. I never knew it existed and I was glad to find it so I can diagnose my computer for any problems. This technology relates in my life because I use my computer everyday and it is helpful to maintain my computer. This section will help me on the job to update computers at the workplace and hopefully will help the system run faster and more efficiently.
