Martin Heidegger finds "an astonishing preview" of Nietzsche’s “entire later philosophical position” in an early note (1870-71) found among early sketches for The Birth of Tragedy: "My philosophy an inverted Platonism: the further removed from true being, the purer, the more beautiful, the better it is. Living in semblance (Schein) as goal.”¹ This, perhaps, “astonishing preview,” this goal of living in the shining of appearance, comes through in much of the unpublished notebooks from the early 1870's. What follows here are selections from two essays, part of the recently published collection, Philosophy and Truth: Selections from Nietzsche’s Notebooks of the Early 1870’s. Both the selections from “The Philosopher: Reflections on the Struggle Between Art and Knowledge” (1872) and the essay “On Truth and Lies in a Nonmoral Sense” (1873) perhaps shed some light on Nietzsche’s thinking on the relationship between philosophy and art, art and truth, during the period of The Birth of Tragedy. After Derrida first drew attention to the latter essay, it has drawn considerable attention as perhaps a preview of Nietzsche’s mature philosophical position.² Both essays seem to offer a preview of Nietzsche’s later reflections on the theme of “untruth as a condition of life” (Beyond Good and Evil, §4) or the view that “we have art lest we perish of the truth (The Will to Power, §822). These notebooks suggest that perhaps The Birth of Tragedy should not be simply dismissed as being too close to Schopenhauer and Romanticism to provide anything of an adequate preview of Nietzsche’s later philosophy. Nietzsche’s reflections in these essays suggests instead that the crossing of the Apollonian by the Dionysian in tragedy should be thought not as an awakening from the dream, but rather an awakening to the dream—that is to say, the crossing of the Apollonian and Dionysian results in the lucid dream, or the goal of living in the shining of appearance. We find in these notebooks something of that crossing of philosophy and art which Nietzsche hints of when he wonders “whether the birth of an ‘artistic Socrates’ is altogether a contradiction in terms” (The Birth of Tragedy, §14).³ With its reflection on dreaming and the metaphorical character of language, the essay “On Truth and Lie” draws a potentially interesting comparison with the famous butterfly dream passage in the Zhuangzi (Section Two).

¹Martin Heidegger, Nietzsche, Volume One: The Will to Power as Art, translated by David F. Krell (San Francisco: Harper and Row, 1979), p. 154. In the German edition of Nietzsche correspondence: Briefwechsel: Kritische Gesamtausgabe, edited by Giogio Colli and Mazzino Montinari (Berlin: De Gruyter, 1975), III 3: 207. Here it is crucial to hear, as John Sallis emphasizes, the full "spread of sense" of Schein—from "shine," to "appearance," "semblance" and "illusion." The world of Schein is the "apparent" (scheinbare) world, the world of lies and illusion, to which the artist is consigned in the structure of Platonism. Sallis offers this brief sketch of a phenomenological analysis to illustrate the spread of Schein: "in order for something to have a certain look, it must show itself, must shine forth; only insofar as it shines so as to have a look can it then become an appearance, for instance, an appearance of something else that perhaps does not shine forth; and only insofar as something has a certain look can it look like something else that it is not, hence become a semblance; finally, both appearance and semblance can develop into various modes of illusion, for instance, something can look so much like something else that it gives itself out as that other thing." John Sallis, Crossings: Nietzsche and the Space of Tragedy (Chicago: University of Chicago Press, 1991), 25-26.

³In a letter from the time he was writing The Birth of Tragedy, Nietzsche hints of this crossing of philosophy and art: "Knowledge, art, and philosophy are now growing together so much in me that I shall in any case give birth to a centaur one day." Letter to Erwin Rohde, January–February 1870. Briefwechsel: Kritische Gesamtausgabe II I: 95.
The Philosopher: Reflections on the Struggle Between Art and Knowledge (1872)

37

The philosopher of tragic knowledge. He masters the uncontrolled knowledge drive [den entfesselten Wissenstrieb], though not by means of a new metaphysics. He establishes no new faith. He considers it tragic that the ground of metaphysics has been withdrawn, and he will never permit himself to be satisfied with the motley whirling game of the sciences. He cultivates a new life; he returns to art its rights.

The philosopher of desperate knowledge will be absorbed in blind science: knowledge at any price.

For the tragic philosopher the appearance of the metaphysical as merely anthropomorphic completes the picture of existence. He is not a skeptic.

Here there is a concept which must be created, for skepticism is not the goal. When carried to its limits the knowledge drive turns against itself in order to proceed to the critique of knowing. Knowledge in the service of the best life. One must even will illusion [Illusion]—that is what is tragic.

48

How does the philosophical genius relate to art? There is not much to be learned from his direct conduct. We must ask: “What is there of art in his philosophy? [In what respect is it] a work of art? What remains when his system has been destroyed as science?” But this left over element must be precisely the one which masters the knowledge drive; therefore, it must be the artistic element in his philosophical system. Why is such a mastery necessary? For, considered scientifically, a philosophical system is an illusion, an untruth which deceives the drive to knowledge and satisfies it only temporarily. In such satisfaction, the value of philosophy does not lie in the sphere of knowledge, but in that of life. The will to existence employs philosophy for the purposes of a higher form of existence.

It is impossible for art and philosophy to oppose the will. Morality likewise is in its service. Omnipotence of the will. One of the most delicate forms of existence, relative nirvana.

52

Every kind of culture begins by veiling a great number of things. Human progress depends upon this veiling. . . .

53

Great dilemma: is philosophy an art or a science? Both in its purposes and its results it is an art. But it uses the same means as science—conceptual representations. Philosophy is a form of artistic invention. . . .

54

Our understanding is a surface power; it is superficial. One also calls it “subjective.” It understands things by means of concepts; i.e., our thinking is a process of categorizing and naming. Thus thinking is something dependent upon human option and does not touch the thing itself. . . .

61

There is no distinct philosophy separated from science: there they think in the same manner that we do here. The reason why inademonstrable philosophizing retains some value, and for the most part a higher value than a scientific proposition, lies in the aesthetic value of such philosophizing, in its beauty and sublimity. Even when it cannot prove itself as a scientific construction, it continues to exist as a work of art. But isn’t it the same in the case of scientific matters? In other words, the aesthetic consideration is decisive, not the pure knowledge drive. The poorly demonstrated philosophy of Heraclitus possesses far more artistic value than do all the propositions of Aristotle. . . .
Man demands truth and fulfills this demand in moral intercourse with other men; this is the basis of all social life. One anticipates the unpleasant consequences of reciprocal lying. From this there arises the duty of truth. We permit epic poets to lie because we expect no detrimental consequences in this case. Thus the lie is permitted where it is considered something pleasant. Assuming that it does no harm, the lie is beautiful and charming. Thus the priest invent myths for his gods which justify their sublimity. It is extraordinarily difficult to revive the mythical feeling of the free lie. Yet the great Greek philosophers dwell entirely within this justification of the lie.

Where one can know nothing that is true, there the lie is permitted.

Every man allows himself to be continually deceived in his dreams at night.

What does truth matter to man? The highest and purest life is possible with the belief that one possess truth. Man requires belief in truth.

Truth makes its appearance as a social necessity. Afterwards, by means of a metastasis, it is applied to everything, where it is not required.

All virtues arise from pressing needs. The necessity for truthfulness begins with society. Otherwise man dwells within eternal concealments. The establishment of states promotes truthfulness.

The drive toward knowledge has a moral origin.

We far too readily confuse Kant's "thing-in-itself" with the Buddhists' "true essence of things." On the one hand actuality exhibits nothing but illusion [Schein]; on the other, it exhibits an appearance [Erscheinung] which is totally adequate to the truth. Illusion [Schein] as non-being is confused with the appearance [Erscheinung] of beings. All possible superstitions find a place in this vacuum.

Man does not by nature exist in order to know: truthfulness (and metaphor) have produced the inclination for truth. Thus the intellectual drive is produced by an aesthetically generalized moral phenomenon.

Imitation is the opposite of knowing, to the extent that knowing certainly does not want to admit any transference, but wishes instead to cling to the impression without metaphor and apart from the consequences. The impression is petrified for this purpose; it is captured and stamped by means of concepts. Then it is killed, skinned, mumified, and preserved as a concept.

But there is no "real" expression and no real knowing apart from metaphor. But deception on this point remains, i.e., the belief in a truth of sense impressions. The most accustomed metaphors, the usual ones, now pass for truths and as standards for measuring the rarer ones. The only intrinsic difference here is the difference between custom and novelty, frequency and rarity.

Knowing is nothing but working with the favorite metaphors, an imitating which is no longer felt to be an imitation. Naturally therefore, it cannot penetrate the realm of truth.

The pathos of the truth drive presupposes the observation that the various metaphorical worlds are at variance and struggle with one another. E.g. the world of dreams, lies, etc. and the ordinary usual view of things: the first type of metaphorical world is rarer; the other is more frequent. Thus the rule struggles against the exception, the regular against the unaccustomed: hence the higher esteem for everyday reality than for the dream world.

Now however, what is rare and unaccustomed is more attractive: the lie is felt as a stimulus.

Poetry.
On Truth and Lies in a Nonmoral Sense (1873)

1

Once upon a time, in some out of the way corner of that universe which is dispersed into numberless twinkling solar systems, there was a star upon which clever beasts invented knowing. That was the most arrogant and mendacious minute of “world history,” but nevertheless, it was only a minute. After nature had drawn a few breaths, the star cooled and congealed, and the clever beasts had to die. —One might invent such a fable, and yet he still would not have adequately illustrated how miserable, how shadowy and transient, how aimless and arbitrary the human intellect looks within nature. There were eternities during which it did not exist. And when it is all over with the human intellect, nothing will have happened. For this intellect has no additional mission which would lead it beyond human life. Rather, it is human, and only its possessor and begetter takes it so solemnly—as though the world’s axis turned within it. But if we could communicate with the gnats, we would learn that he likewise flies through the air with the same solemnity, that he feels the flying center of the universe within himself. There is nothing so reprehensible and unimportant in nature that it would not immediately swell up like a balloon at the slightest puff of this power of knowing. And just as every porter wants to have an admirer, so even the proudest of men, the philosopher, supposes that he sees on all sides the eyes of the universe telescopically focused upon his action and thought.

It is remarkable that this was brought about by the intellect, which was certainly allotted to these most unfortunate, delicate, and ephemeral beings merely as a device for detaining them a minute within existence. For without this addition they would have every reason to flee this existence as quickly as Lessing’s son. The pride connected with knowing and sensing lies like a blinding fog over the eyes and senses of men, thus deceiving them concerning the value of existence. For this pride contains within itself the most flattering estimation of the value of knowing. Deception is the most general effect of such pride, but even its most particular effects contain within themselves something of the same deceitful character.

As a means for the preserving of the individual, the intellect unfolds its principle powers in dissimulation, which is the means by which weaker, less robust individuals preserve themselves—since they have been denied the chance to wage the battle for existence with horns or with the sharp teeth of beasts of prey. This art of dissimulation reaches its peak in man. Deception, flattering, lying, deluding, talking behind the back, putting up a false front, living in borrowed splendor, wearing a mask, hiding behind convention, playing a role for others and for oneself—in short, a continuous fluttering around the solitary flame of vanity—is so much the rule and the law among men that there is almost nothing which is less comprehensible than how an honest and pure drive for truth could have arisen among them. They are deeply immersed in illusions and in dream images; their eyes merely glide over the surface of things and see “forms.” Their senses nowhere lead to truth; on the contrary, they are content to receive stimuli and, as it were, to engage in a groping game on the backs of things. Moreover, man permits himself to be deceived in his dreams every night of his life. His moral sentiment does not even make an attempt to prevent this, whereas there are supposed to be men who have stopped snoring through sheer will power. What does man actually know about himself? Is he, indeed, ever able to perceive himself completely, as if laid out in a lighted display case? Does nature not conceal most things from him—even concerning his own body—in order to confine and lock him within a proud, deceptive consciousness, aloof from the coils of the bowels, the rapid flow of the blood stream, and the intricate quivering of the fibers! She threw away the key. And woe to that fatal curiosity which might one day have the power to peer out and down through a crack in the chamber of consciousness.

---

1 A more literal, though less English, translation of Über Wahrheit und Lüge im aussermoralischen Sinne might be “On Truth and Lie in the Extramoral Sense.

2 A reference to the offspring of Lessing and Eva König, who died on the day of his birth.

3 Verstellung.
Nietzsche & Asian Philosophy  Selections from Nietzsche’s Notebooks of the Early 1870’s—5

and then suspect that man is sustained in the indifference of his ignorance by that which is pitiless, greedy, insatiable, and murderous—as if hanging in dreams on the back of a tiger. Given this situation, where in the world could the drive for truth have come from?

Insofar as the individual wants to maintain himself against other individuals, he will under natural circumstances employ the intellect mainly for dissimulation. But at the same time, from boredom and necessity, man wishes to exist socially and with the herd; therefore, he needs to make peace and strives accordingly to banish from his world at least the most flagrant bellum omni contra omnes. This peace treaty brings in its wake something which appears to be the first step toward acquiring that puzzling truth drive: to wit, that which shall count as “truth” from now on is established. That is to say, a uniformly valid and binding designation is invented for things, and this legislation of language likewise establishes the first laws of truth. For the contrast between truth and lie arises here for the first time. The liar is a person who uses the valid designations, the words, in order to make something which is unreal appear to be real. He says, for example, “I am rich,” when the proper designation for his condition would be “poor.” He misuses fixed conventions by means of arbitrary substitutions or even reversals of names. If he does this in a selfish and moreover harmful manner, society will cease to trust him and will thereby exclude him. What men avoid by excluding the liar is not so much being defrauded as it is being harmed by means of fraud. Thus, even at this stage, what they hate is basically not deception itself, but rather the unpleasant, hated consequences of certain sorts of deception. It is in a similarly restricted sense that man now wants nothing but truth: he desires the pleasant, life-preserving consequences of truth. He is indifferent toward pure knowledge which has no consequences; toward those truths which are possibly harmful and destructive he is even hostilely inclined. And besides, what about these linguistic conventions themselves? Are they perhaps products of knowledge, that is, of the sense of truth? Are designations congruent with things? Is language the adequate expression of all realities?

It is only by means of forgetfulness that man can ever reach the point of fancying himself to possess a “truth” of the grade just indicated. If he will not be satisfied with truth in the form of tautology, that is to say, if he will not be content with empty husks, then he will always exchange truths for illusions. What is a word? It is the copy in sound of a nerve stimulus. But the further inference from the nerve stimulus to a cause outside of us is already the result of a false and unjustifiable application of the principle of sufficient reason. If truth alone had been the deciding factor in the genesis of language, and if the standpoint of certainty had been decisive for designations, then how could we still dare to say “the stone is hard,” as if “hard” were something otherwise familiar to us, and not merely a totally subjective stimulation! We separate things according to gender, designating the tree as masculine and the plant as feminine. What arbitrary assignments! How far this oversteps the canons of certainty! We speak of a “snake”: this designation touches only upon its ability to twist itself and could therefore also fit a worm. What arbitrary

4 “War of each against all.”

5 Note that Nietzsche is here engaged in an implicit critique of Schopenhauer, who had been guilty of precisely this misapplication of the principle of sufficient reason in his first book, The Fourfold Root of the Principle of Sufficient Reason. It is quite wrong to think that Nietzsche was ever wholly uncritical of Schopenhauer’s philosophy (see, for example, the little essay, Kritik der Schopenhauerischen Philosophie from 1867, in MA, I, pp. 392-401).

6 welche willkürlichen Übertragungen. The specific sense of this passage depends upon the fact that all ordinary nouns in the German language are assigned gender: the tree is der Baum; the plant is die Pflanze. This assignment of an original sexual property to all things is the “transference” in question.

7 This passage depends upon the etymological relation between the German words Schlange (snake) and schlingen (to wind or twist), both of which are related to the old High German slango.
differentiations! What one-sided preferences, first for this, then for that property of a thing! The various languages placed side by side show that with words it is never a question of truth, never a question of adequate expression; otherwise, there would not be so many languages. The “thing in itself” (which is precisely what the pure truth, apart from any of its consequences, would be) is likewise something quite incomprehensible to the creator of language and something not in the least worth striving for. This creator only designates the relations of things to men, and for expressing these relations he lays hold of the boldest metaphors. To begin with, a nerve stimulus is transferred into an image; first metaphor. The image, in turn, is imitated in a sound second metaphor. And each time there is a complete overlapping of one sphere, right into the middle of an entirely new and different one. One can imagine a man who is totally deaf and has never had a sensation of sound and music. Perhaps such a person will gaze with astonishment at Chladni’s sound figures; perhaps he will discover their causes in the vibrations of the string and will now swear that he must know what men mean by “sound.” It is this way with all of us concerning language: we believe that we know something about the things themselves when we speak of trees, colors, snow, and flowers; and yet we possess nothing but metaphors for things—metaphors which correspond in no way to the original entities. In the same way that the sound appears as a sand figure, so the mysterious X of the thing in itself first appears as a nerve stimulus, then as an image, and finally as a sound. Thus the genesis of language does not proceed logically in any case, and all the material within and with which the man of truth, the scientist, and the philosopher later work and build, if not derived from never-never land, is at least not derived from the essence of things.

In particular, let us further consider the formation of concepts. Every word instantly becomes a concept precisely insofar as it is not supposed to serve as a reminder of the unique and entirely individual original experience to which it owes its origin; but rather, a word becomes a concept insofar as it simultaneously has to fit countless more or less similar cases—which means, purely and simply, cases which are never equal and thus altogether unequal. Every concept arises from the equation of unequal things. Just as it is certain that one leaf is never totally the same as another, so it is certain that the concept “leaf” is formed by arbitrarily discarding these individual differences and by forgetting the distinguishing aspects. This awakens the idea that, in addition to the leaves, there exists in nature the “leaf”: the original model according to which all the leaves were perhaps woven, sketched, measured, colored, curled, and painted—but by incompetent hands, so that no specimen has turned out to be a correct, trustworthy, and faithful likeness of the original model. We call a person “honest,” and then we ask “why has he behaved so honestly today?” Our usual answer is, “on account of his honesty.” Honesty! This in turn means that the leaf is the cause of the leaves. We know nothing whatsoever about an essential quality called “honesty”; but we do know of countless individualized and consequently unequal actions which we equate by omitting the aspects in which they are unequal and which we now designate as “honest” actions. Finally we formulate from them a qualitas occulta which has the name “honesty.” We obtain the concept, as we do the form, by overlooking what is individual and actual; whereas nature is acquainted with no forms and no concepts, and likewise with no species, but only with an X which remains inaccessible and undefinable for us. For even our contrast between individual and species is something anthropomorphic and does not originate in the essence of things;

---

8 What Nietzsche is rejecting here is the theory that there is a sort of “naturally appropriate” connection between certain words (or sounds) and things. Such theory is defended by Socrates in Plato’s Cratylus.

9 Ein Nervenreiz, zuerst übertragen in ein Bild. The “image” in this case is the visual image, what we “see.”

10 Wesenheiten.

12 “Occult quality.”
although we should not presume to claim that this contrast does not correspond to the essence of things: that would of course be a dogmatic assertion and, as such, would be just as indemonstrable as its opposite.13

What then is truth? A movable host of metaphors, metonymies, and anthropomorphisms: in short, a sum of human relations which have been poetically and rhetorically intensified, transferred, and embellished, and which, after long usage, seem to a people to be fixed, canonical, and binding. Truths are illusions which we have forgotten are illusions; they are metaphors that have become worn out and have been drained of sensuous force, coins which have lost their embossing and are now considered as metal and no longer as coins.

We still do not yet know where the drive for truth comes from. For so far we have heard only of the duty which society imposes in order to exist: to be truthful means to employ the usual metaphors. Thus, to express it morally, this is the duty to lie according to a fixed convention, to lie with the herd and in a manner binding upon everyone. Now man of course forgets that this is the way things stand for him. Thus he lies in the manner indicated, unconsciously and in accordance with habits which are centuries’ old; and precisely by means of this unconsciousness and forgetfulness he arrives at his sense of truth. Front the sense that one is obliged to designate one thing as “red,” another as “cold,” and a third as “mute,” there arises a moral impulse in regard to truth. The venerability, reliability, and utility of truth is something which a person demonstrates for himself from the contrast with the liar, whom no one trusts and everyone excludes. As a “rational” being, he now places his behavior under the control of abstractions. He will no longer tolerate being carried away by sudden impressions, by intuitions. First he universalizes all these impressions into less colorful, cooler concepts, so that he can entrust the guidance of his life and conduct to them. Everything which distinguishes man from the animals depends upon this ability to volatilize perceptual metaphors14 in a schema, and thus to dissolve an image into a concept. For something is possible in the realm of these schemata which could never be achieved with the vivid first impressions: the construction of a pyramidal order according to castes and degrees, the creation of a new world of laws, privileges, subordinations, and clearly marked boundaries—a new world, one which now confronts that other vivid world of first impressions as more solid, more universal, better known, and more human than the immediately perceived world, and thus as the regulative and imperative world. Whereas each perceptual metaphor is individual and without equals and is therefore able to elude all classification, the great edifice of concepts displays the rigid regularity of a Roman columbarium15 and exhales in logic that strength and coolness which is characteristic of mathematics. Anyone who has felt this cool breath [of logic] will hardly believe that even the concept—which is as bony, foursquare, and transposable as a die—is nevertheless merely the residue of a metaphor, and that the illusion which is involved in the artistic transference of a nerve stimulus into images is, if not the mother, then the grandmother of every single concept.16 But in this conceptual crap game “truth” means using every die in the designated manner, counting its spots accurately, fashioning the right categories, and never violating the order of caste and class rank. Just as the Romans and Etruscans cut up the heavens with rigid mathematical lines and confined a god within each of the spaces thereby delimited, as within a templum,17 so every people has a similarly mathematically divided conceptual heaven above themselves and henceforth thinks that truth demands that each conceptual god be sought only within his own sphere. Here

13 Nietzsche criticizes Kant on just this score in P, 84.

14 die anschaulichen Metaphern. Regarding the translation of Anschauung, see P. n. 82. The adjective anschaulich has the additional sense of “vivid”—as in the next sentence (“vivid first impressions”).

15 A columbarium is a vault with niches for funeral urns containing the ashes of cremated bodies.

16 I.e. concepts are derived from images, which are, in turn, derived from nerve stimuli.

17 A delimited space restricted to a particular purpose, especially a religiously sanctified area.
Nietzsche & Asian Philosophy

Selections from Nietzsche’s Notebooks of the Early 1870’s—8

one may certainly admire man as a mighty genius of construction, who succeeds in piling up an infinitely complicated dome of concepts upon an unstable foundation, and, as it were, on running water. Of course, in order to be supported by such a foundation, his construction must be like one constructed of spiders’ webs: delicate enough to be carried along by the waves, strong enough not to be blown apart by every wind. As a genius of construction man raises himself far above the bee in the following way: whereas the bee builds with wax that he gathers from nature, man builds with the far more delicate conceptual material which he first has to manufacture from himself. In this he is greatly to be admired, but not on account of his drive for truth or for pure knowledge of things. When someone hides something behind a bush and looks for it again in the same place and finds it there as well, there is not much to praise in such seeking and finding. Yet this is how matters stand regarding seeking and finding “truth” within the realm of reason. If I make up the definition of a mammal, and then, after inspecting a camel, declare “look, a mammal,” I have indeed brought a truth to light in this way, but it is a truth of limited value. That is to say, it is a thoroughly anthropomorphic truth which contains not a single point which would be “true in itself” or really and universally valid apart from man. At bottom, what the investigator of such truths is seeking is only the metamorphosis of the world into man. He strives to understand the world as something analogous to man, and at best he achieves by his struggles the feeling of assimilation. Similar to the way in which astrologers considered the stars to be in man’s service and connected with his happiness and sorrow, such an investigator considers the entire universe in connection with man: the entire universe as the infinitely fractured echo of one original sound—man; the entire universe as the infinitely multiplied copy of one original picture—man. His method is to treat man as the measure of all things, but in doing so he again proceeds from the error of believing that he has these things [which he intends to measure] immediately before him as mere objects. He forgets that the original perceptual metaphors are metaphors and takes them to be the things themselves.

Only by forgetting this primitive world of metaphor can one live with any repose, security, and consistency: only by means of the petrification and coagulation of a mass of images which originally streamed from the primal faculty of human imagination like a fiery liquid, only in the invincible faith that this sun, this window, this table is a truth in itself, in short, only by forgetting that he himself is an artistically creating subject, does man live with any repose, security, and consistency. If but for an instant he could escape from the prison walls of this faith, his “self consciousness” would be immediately destroyed. It is even a difficult thing for him to admit to himself that the insect or the bird perceives an entirely different world from the one that man does, and that the question of which of these perceptions of the world is the more correct one is quite meaningless, for this would have to have been decided previously in accordance with the criterion of the correct perception, which means, in accordance with a criterion which is not available. But in any case it seems to me that “the correct perception”—which would mean “the adequate expression of an object in the subject”—is a contradictory impossibility. For between two absolutely different spheres, as between subject and object, there is no causality, no correctness, and no expression; there is, at most, an aesthetic relation: I mean, a suggestive transference, a stammering translation into a completely foreign tongue—for which there is required, in any case, a freely inventive intermediate sphere and mediating force. “Apearance” is a word that contains many temptations which is why I avoid it as much as possible. For it is not true that the essence of things “appears” in the empirical world. A painter without hands who wished to express in song the picture before his mind would, by means of this substitution of spheres, still reveal more about the essence of things than does the empirical world. Even the relationship of a nerve stimulus to the generated image is not a necessary one. But when the same image has been generated millions of times and has been handed down for many generations and finally appears on the same occasion every time for all mankind, then it acquires at last the same meaning for men it would have if it were the sole necessary image and if the relationship of the original nerve stimulus to the generated image were a strictly causal one. In the

18 ein ästhetisches Verhalten. A more literal translation of Verhalten is “behavior,” “attitude,” or perhaps “disposition.”
same manner, an eternally repeated dream would certainly be felt and judged to be reality. But the hardening and congealing of a metaphor guarantees absolutely nothing concerning its necessity and exclusive justification.

Every person who is familiar with such considerations has no doubt felt a deep mistrust of all idealism of this sort: just as often as he has quite clearly convinced himself of the eternal consistency, omnipresence, and infallibility of the laws of nature. He has concluded that so far as we can penetrate here—from the telescopic heights to the microscopic depths—everything is secure, complete, infinite, regular, and without any gaps. Science will be able to dig successfully in this shaft forever, and all the things that are discovered will harmonize with and not contradict each other. How little does this resemble a product of the imagination, for if it were such, there should be some place where the illusion and unreality can be divined. Against this, the following must be said: if each of us had a different kind of sense perception—if we could only perceive things now as a bird, now as a worm, now as a plant, or if one of us saw a stimulus as red, another as blue, while a third even heard the same stimulus as a sound—then no one would speak of such a regularity of nature, rather, nature would be grasped only as a creation which is subjective in the highest degree. After all, what is a law of nature as such for us? We are not acquainted with it in itself, but only with its effects, which means in its relation to other laws of nature—which, in turn, are known to us only as sums of relations. Therefore all these relations always refer again to others and are thoroughly incomprehensible to us in their essence. All that we actually know about these laws of nature is what we ourselves bring to them—time and space, and therefore relationships of succession and number. But everything marvelous about the laws of nature, everything that quite astonishes us therein and seems to demand our explanation, everything that might lead us to distrust idealism: all this is completely and solely contained within the mathematical strictness and inviolability of our representations of time and space. But we produce these representations in and from ourselves with the same necessity with which the spider spins. If we are forced to comprehend all things only under these forms, then it ceases to be amazing that in all things we actually comprehend nothing but these forms. For they must all bear within themselves the laws of number, and it is precisely number which is most astonishing in things. All that conformity to law, which impresses us so much in the movement of the stars and in chemical processes, coincides at bottom with those properties which we bring to things. Thus it is we who impress ourselves in this way. In conjunction with this, it of course follows that the artistic process of metaphor formation with which every sensation begins in us already presupposes these forms and thus occurs within them. The only way in which the possibility of subsequently constructing a new conceptual edifice from metaphors themselves can be explained is by the firm persistence of these original forms. That is to say, this conceptual edifice is an imitation of temporal, spatial, and numerical relationships in the domain of metaphor.  

---

19 Regarding the special epistemological significance which Nietzsche attached to number and numerical relations, see P., n. 46.

20 This is where section 1 of the fair copy made by von Gersdorff ends. But according to Schlechta (in SchlechtalAnders, pp. 14-5) Nietzsche’s preliminary version continued as follows:

“Empty space and empty time are ideas which are possible at any time. Every concept, thus an empty metaphor, is only an imitation of these first ideas: space, time, and causality. Afterwards, the original imaginative act of transference into images: the first provides the matter, the second the qualities which we believe in, Comparison to music’. How can one speak of it?”
We have seen how it is originally language which works on the construction of concepts, a labor taken over in later ages by science. Just as the bee simultaneously constructs cells and fills them with honey, so science works unceasingly on this great columbarium of concepts, the graveyard of perceptions. It is always building new, higher stories and shoring up, cleaning, and renovating the old cells; above all, it takes pains to fill up this monstrously towering framework and to arrange therein the entire empirical world, which is to say, the anthropomorphic world. Whereas the man of action binds his life to reason and its concepts so that he will not be swept away and lost, the scientific investigator builds his hut right next to the tower of science so that he will be able to work on it and to find shelter for himself beneath those bulwarks which presently exist. And he requires shelter, for there are frightful powers which continuously break in upon him, powers which oppose scientific “truth” with completely different kinds of “truths” which bear on their shields the most varied sorts of emblems.

The drive toward the formation of metaphors is the fundamental human drive, which one cannot for a single instant dispense with in thought, for one would thereby dispense with man himself. This drive is not truly vanquished and scarcely subdued by the fact that a regular and rigid new world is constructed as its prison from its own ephemeral products, the concepts. It seeks a new realm and another channel for its activity, and it finds this in myth and in art generally. This drive continually confuses the conceptual categories and cells by bringing forward new transferences, metaphors, and metonymies. It continually manifests an ardent desire to refashion the world which presents itself to waking man, so that it will be as colorful, irregular, lacking in results and coherence, charming, and eternally new as the world of dreams. Indeed, it is only by means of the rigid and regular web of concepts that the waking man clearly sees that he is awake; and it is precisely because of this that he sometimes thinks that he must be dreaming when this web of concepts is torn by art. Pascal is right in maintaining that if the same dream came to us every night we would be just as occupied with it as we are with the things that we see every day. “If a workman were sure to dream for twelve straight hours every night that he was king,” said Pascal, “I believe that he would be just as happy as a king who dreamt for twelve hours every night that he was a workman.” In fact, because of the way that myth takes it for granted that miracles are always happening, the waking life of a mythically inspired people—the ancient Greeks, for instance—more closely resembles a dream than it does the waking world of a scientifically disenchanted thinker. When every tree can suddenly speak as a nympha, when a god in the shape of a bull can drag away maidens, when even the goddess Athena herself is suddenly seen in the company of Peisistratus driving through the market place of Athens with a beautiful team of horses—and this is what the honest Athenian believed—then, as in a dream, anything is possible at each moment, and all of nature swarms around man as if it were nothing but a masquerade of the gods, who were merely amusing themselves by deceiving men in all these shapes.

But man has an invincible inclination to allow himself to be deceived and is, as it were, enchanted with happiness when the rhapsodist tells him epic fables as if they were true, or when the actor in the theater acts more royally than any real king. So long as it is able to deceive without injuring, that master of

21 Wissenschaft. This word has to be translated as “science,” but it is important to remember that “science” in German refers to rigorous, systematic, disciplined inquiry as such, and is by no means synonymous with “natural science.” Mathematics, history, and philosophy are all “sciences” in the fullest sense of the German word.

22 Pensées, number 386. Actually, Pascal says that the workman would be “almost as happy” as the king in this case!

23 According to the story told by Herodotus (Histories 1, 60) the tyrant Peisistratus adopted the following ruse to secure his popular acceptance upon his return from exile: he entered Athens in a chariot accompanied by a woman named Phye who was dressed in the costume of Athena. Thus the people were supposed to have been convinced that it was the goddess herself who was conducting the tyrant back to the Acropolis.
deception, the intellect, is free; it is released from its former slavery and celebrates its Saturnalia. It is never more luxuriant, richer, prouder, more clever and more daring. With creative pleasure it throws metaphors into confusion and displaces the boundary stones of abstractions, so that, for example, it designates the stream as “the moving path which carries man where he would otherwise walk.” The intellect has now thrown the token of bondage from itself. At other times it endeavors, with gloomy officiousness, to show the way and to demonstrate the tools to a poor individual who covets existence; it is like a servant who goes in search of booty and prey for his master. But now it has become the master and it dares to wipe from its face the expression of indigence. In comparison with its previous conduct, everything that it now does bears the mark of dissimulation, just as that previous conduct did of distortion. The free intellect copies human life, but it considers this life to be something good and seems to be quite satisfied with it. That immense framework and planking of concepts to which the needy man clings his whole life long in order to preserve himself is nothing but a scaffolding and toy for the most audacious feats of the liberated intellect, And when it smashes this framework to pieces, throws it into confusion, and puts it back together in an ironic fashion, pairing the most alien things and separating the closest, it is demonstrating that it has no need of these makeshifts of indigence and that it will now be guided by intuitions rather than by concepts. There is no regular path which leads from these intuitions into the land of ghostly schemata, the land of abstractions. There exists no word for these intuitions; when man sees them he grows dumb, or else he speaks only in forbidden metaphors and in unheard-of combinations of concepts. He does this so that by shattering and mocking the old conceptual barriers he may at least correspond creatively to the impression of the powerful present intuition.

There are ages in which the rational man and the intuitive man stand side by side, the one in fear of intuition, the other with scorn for abstraction. The latter is just as irrational as the former is inartistic. They both desire to rule over life: the former, by knowing how to meet his principle needs by means of foresight, prudence, and regularity; the latter, by disregarding these needs and, as an “overjoyed hero,” counting as real only that life which has been disguised as illusion and beauty. Whenever, as was perhaps the case in ancient Greece, the intuitive man handles his weapons more authoritatively and victoriously than his opponent, then, under favorable circumstances, a culture can take shape and art’s mastery over life can be established. All the manifestations of such a life will be accompanied by this dissimulation, this disavowal of indigence, this glitter of metaphorical intuitions, and, in general, this immediacy of deception: neither the house, nor the gait, nor the clothes, nor the clay jugs give evidence of having been invented because of a pressing need. It seems as if they were all intended to express an exalted happiness, an Olympian cloudlessness, and, as it were, a playing with seriousness. The man who is guided by concepts and abstractions only succeeds by such means in warding off misfortune, without ever gaining any happiness for himself from these abstractions. And while he aims for the greatest possible freedom from pain, the intuitive man, standing in the midst of a culture, already reaps from his intuition a harvest of continually inflowing illumination, cheer, and redemption—in addition to obtaining a defense against misfortune. To be sure, he suffers more intensely, when he suffers; he even suffers more frequently, since he does not understand how to learn from experience and keeps falling over and over again into the same ditch. He is then just as irrational in sorrow as he is in happiness: he cries aloud and will not be consoled. How differently the stoical man who learns from experience and governs himself by concepts is affected by the same misfortunes! This man, who at other times seeks nothing but sincerity, truth, freedom from deception, and protection against ensnaring surprise attacks, now executes a masterpiece of deception: he executes his masterpiece of deception in misfortune, as the other type of man executes his in times of happiness. He wears no quivering and changeable human face, but, as it were, a mask

25 Verzerrung.
with dignified, symmetrical features. He does not cry; he does not even alter his voice. When a real storm cloud thunders above him, he wraps himself in his cloak, and with slow steps he walks from beneath it.

Notes added by Nietzsche to the essay “On Truth and Lies in a Nonmoral Sense”

183

All lies are necessary lies. The pleasure of lying is an artistic pleasure; otherwise, only truth would possess any pleasure in itself. Artistic pleasure is the greatest kind of pleasure, because it speaks the truth quite generally in the form of lies.

The concept of personality, and certainly the concept of moral freedom, are necessary illusions [Illusionen]. Thus even our truth drives rest upon a foundation of lies.

184

How is it that art is only possible as a lie?

When they are closed, my eyes perceive countless changing images within themselves. Imagination produces these images, and I know that they do not correspond to reality. Thus I believe in them only as images, and not as realities.

Surfaces, forms.

Art includes the delight of awakening belief by means of surfaces. But one is not really deceived! [If one were] then art would cease to be.

Art works through deception—yet one which does not deceive us?

art treats illusion [Schein] as illusion [Schein]; therefore it does not wish to deceive; it is true.

Pure disinterested contemplation is possible only in regard to illusions [Schein] which have been recognized as illusions [Schein]

Only a person who could contemplate the entire world as an illusion [Schein] would be in a position to view it apart from desires and drives: the artist and the philosopher. Here instinctive drive [Trieb] comes to an end.

So long as one seeks the truth about the world he remains under the control of the drives. But he who desires pleasure rather than truth will desire the belief in truth, and consequently the pleasurable effects of this belief.

The world as an illusion [Schein]: saint, artist, philosopher.
