

# Working with SSH

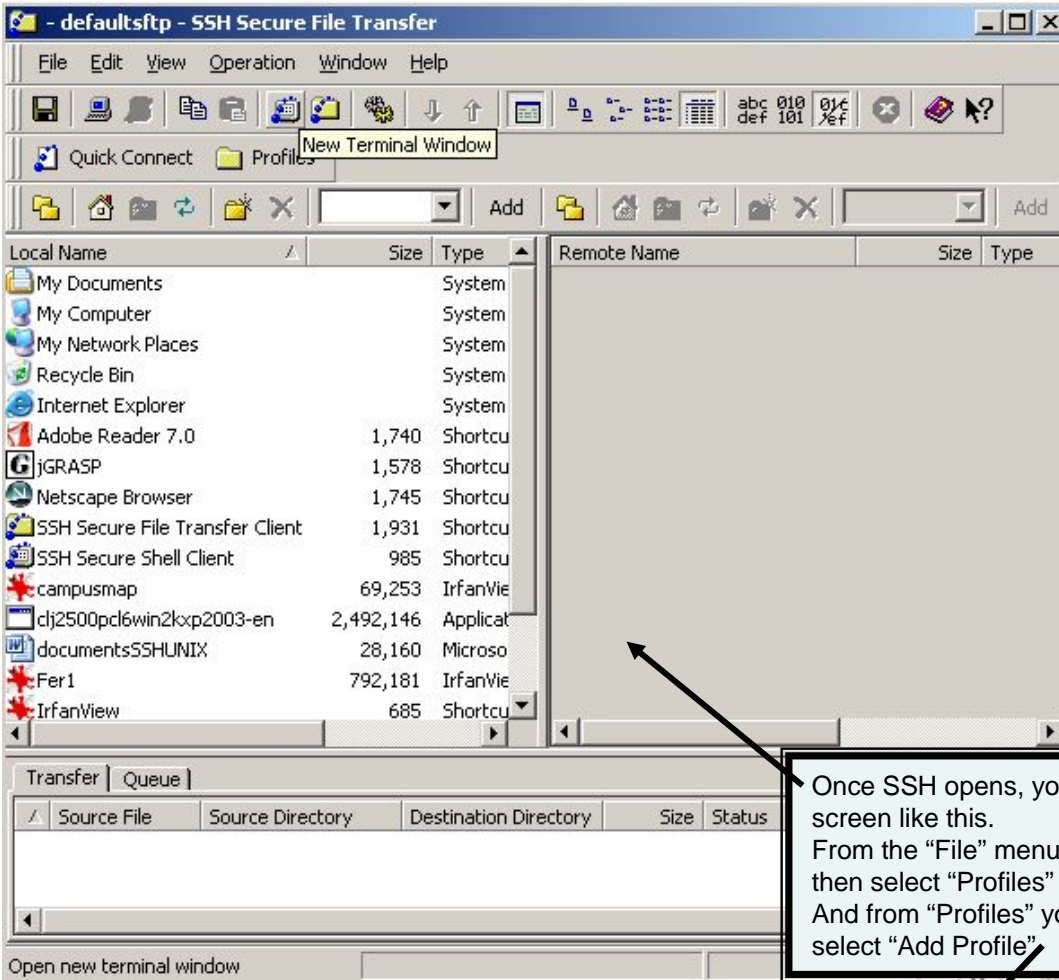

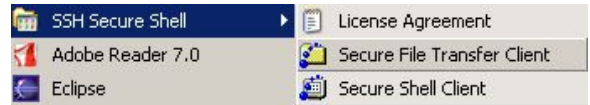

Handout by: Blanca Polo

After downloading and installing SSH in your computer:

You will need to configure SSH before you begin working with it. Double click in the SSH icon.

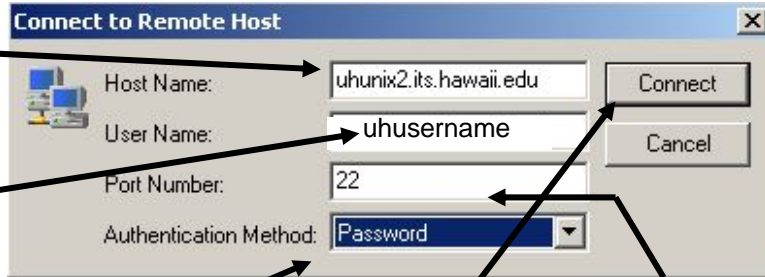

If there is no visible icon then look for the program in the menu.

You will now need to set up your profile so that you can connect to UHUNIX anytime you want.

The "Host Name" should be uhunix2.its.hawaii.edu

The "User Name" should be your username/UH login name.

Select "Password" as the Authentication Method

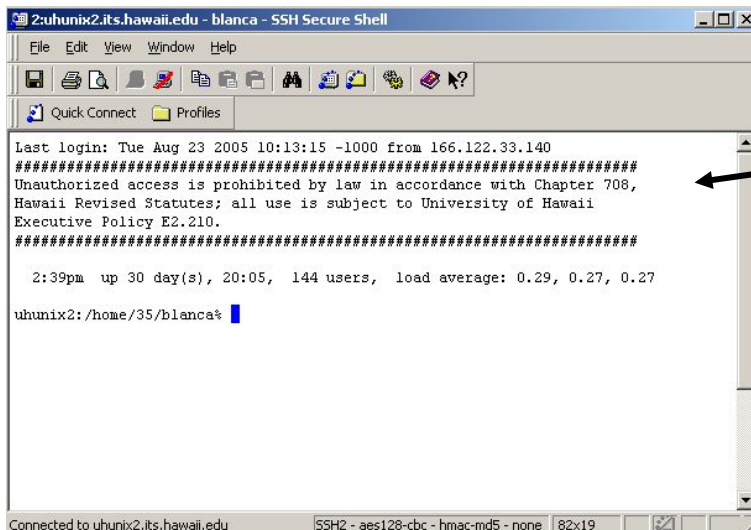

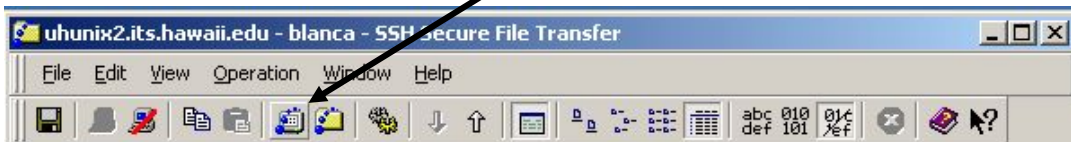

Do not modify the Port Number, leave the 22 in there

Once you have done all of the above, you can connect to UHUNIX by clicking "Connect"

UNIX will ask for your password to log you in.

Once you are connected you can bring up a terminal screen to begin your work. For this you will click on the terminal icon.

Your terminal window connection will look like this. At this point you already are connected to UNIX and ready to begin working.
