7. Please comment on Lecturer's performance as your instructor.
I really enjoyed Professor Marek's lectures. Although he mentioned not enjoying speaking in front of class, he did a wonderful job for his first time. I really enjoyed the short 3 session labs we had and wished we had more time to witness the experiments.
very good
The professor always encouraged questions and offered to help clear up confusion. He returned back exams in a very timely manner and gave us tips in order to prepare. He asked about our own interests so he could incorporate that into his own lectures.
I really enjoyed having Dr. Kirs as a professor. He was passionate about the course material and made himself available to any students that needed help or had questions. He was available to help and listened to the students if they had any concerns or suggestions.
He always made sure to challenge us and made sure we really understood the topics which was very helpful.
Very knowledgeable in the subject. Is an excellent professor passionate about his work.
i understood a lot of what he was saying and learned alot about microbes

8. Please comment on the quality and value of the COURSE.
I like how there are 4 exams and none of them being cumulative. I feel that Prof. Marek was able to cover a wide ray of subjects with the schedule being set this way. I'm glad that there is no corresponding lab for this class and feel that the class is well structured without one. It would be great to see more people enroll for this class next semester as it is very informative relates well with everything going on in the world.
very valuable to the environment
I learned a lot about microbes and enjoyed getting to see the lab aspect as well. Having a guest lecturer helped us to see how others apply this knowledge into their career.
You really get to learn a lot in this course. It touches upon a wide range of topics related to microbiology. I think this is a great course to take.
Really interesting and informative.
A lot of available material and outside info was provided which is excellent for students wanting to learn more about what was gone over in class. Very well done and put together. Lab demonstrations are excellent and helps the students see what they are learning about.
he did a good job teaching and i learned more about microbiology
